Transitions

Place the transition in the "ALT" field.

- slideleft
- slideright
- slideup
- slidedown
- pushup
- pushdown
- popup
- popdown
- fade
- fade
- fadefast
- flipleft
- flipright
- swapleft
- swapright
- cubeleft
- cuberight
- slidetopup
- slidetopdown

Touch Application Prototype (TAP) Cheatsheet

TAP version 0.46 | UNITiD | Sebastian Conijn

It is recommended to read the "TAP" article on the website for more information. You can find a tutorial and other usefull tools on our website.
http://unitid.nl/category/tools/

Resolutions

	Normal	Loading
iPhone	320 x 480	320x460
iPhone 4	640 x 960	640 x 920
iPad	768 x 1024	768 x 1004
icon	114 x 114	

Transparent overlay

1. Make a hotspot
2. Give it a link to the overlay
3. Type in target "keep"

Example

target:	keep

On the page of the overlay place a hotspot with a link where the target is clear. This releases the background image so it won't show up on other overlays.

target:	clear

Landscape page

To make a landscape page, just name the page in fireworks with a "_l".

name:	index_l

Memory
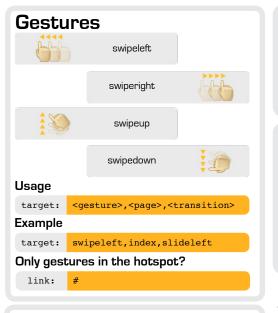

1. Make a hotspot on the page you want to remember
2. Give the page a link and transition.
3. The target is m1, m2, etc

target:	m1

4. If you want to go back to the page in the memory, type in the link-field #m<number you used>.

link:	#m1

Gestures

- swipeleft
- swiperight
- swipeup
- swipedown

Usage

target:	<gesture>,<page>,<transition>

Example

target:	swipeleft,index,slideleft

Only gestures in the hotspot?

link:	#

Call, alert, email and links

Example of call

link:	tel:+3161234567

Example of alert

link:	javascript:alert('message!')

Example of mail with subject

link:	mailto:info@email.com?subject=hey

Example of website

link:	http://www.unitid.nl

Tips & tricks

For the best quality, save the page as a PNG32. For large prototype, save space by saving as JPG

Delete all the files in the Library folder before doing an export from Fireworks, save a lot of OK-ing messages.

Timers

1. Make a hotspot
2. Give it a link to the result
3. Target is timeout=3000

target:	timeout=<milliseconds>

Back button

1. Make a hotspot
2. Fill the "alt" tag with "back" and the target with "#"
3. That's all!

target:	#

alt:	back

Add-on's

1. Create a folder "addons"
2. Create a page with the extension ".htm"
3. Place the embed code and give the container:

```
position: absolute; z-index: 88;
top:...px; left:...px;
```

Solid black statusbar

1. Open "build/includes/indextemplate.shtml"
2. On line 8, change the "black-translucent" into "black".
3. Upload!
